

made in JAPAN

Patented mirror made in Japan! Reflects the real color of human skin!

Made of Napure Mirror made in JAPAN

Horiuchi Mirror Industry Co., Ltd.

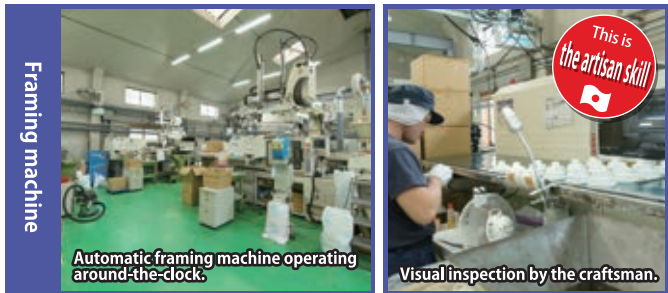

1 Manufacturing process

Ultra-clear glass plates (914 mm x 600 mm) free of contaminants are washed, and an aluminum layer is deposited with a vacuum-deposition machine for 15 min. The mirror with vacuum-deposited aluminum layer reflects everything clearly and is safe for human and natural environment owing to the lead-free painting applied for the protective layer of the mirror.

2 Cutting and beveling

The mirrors are automatically precut by the CNC cutter according to the dimensional data sent from the CAD system to the cutter, and cut apart manually by the craftsman.

3 Framing

Automatic framing machine operating around-the-clock
The mirrors are fitted with plastic frames automatically.

3 Welding

The materials are fused and adhered by high frequency wave.
The technique is employed for manufacturing the PROFESSIONAL MODEL FOLDABLE STAND MIRRORS.

4 Assembly, inspection and packing

Each piece of "Napure Mirror" is carefully assembled with a frame. The assembled items are inspected visually and with measuring instruments. The items of "Napure Mirror" passing the strict inspection are packed and shipped.
